

# RF++

## Taking your **RF** Screens to the Next Level

### What is **RF++**?

All JDA/ Blue Yonder (BY) WMS implementations need an RF Solution; a solution for physical devices that are used on the floor to perform most of the warehouse functions. Overtime we have seen many upgrades to the GUI application, but almost none for RF screens. With many more hours spent on RF screens than the GUI application, it was essential to provide more opportunities for these screens.

At Smart IS we have been working with JDA/ BY systems for a long time and we understand the needs of RF Solutions. That is why we are able to offer our RF++ solution geared towards warehouse floors.

Smart IS's RF++ application provides many enhancements to your RF screens.

# Benefits

Builds on Existing BY Solution

Can be Enhanced to User's Needs

Eases System Support

Reduces the Need for Developers

Removes Need for Key Combinations

Maximize Information Per Screen

Easy Access to Function Keys

Better User Experience

# Features

Communication Support

Touch Support

Screen Layout Enhancement

Voice Support
