# TAKE YOUR **JDA/BY** APPLICATION **ANYWHERE, ANYTIME, WITH METRON**

## **BY SMART-IS**

Introducing Metron, the Q-Tool:  
An application that allows  
JDA/Blue Yonder (BY) users to access  
DDAs on a mobile device of their  
choice.

Metron is developed by Smart-IS.  
Smart-IS is an I.T. consulting partner to North American companies and their international affiliates.  
Having over 20 years of expertise in various technologies and industries, Smart-IS has been an I.T. services partner to an array of companies

# METRON

**THE METRON  
APPLICATION CAN  
SERVE ALL JDA/BY  
USERS.**

Metron challenges the existing paradigm of being stuck at your workstation. Organizations that have invested in creating DDAs to access different data elements of their warehouse will greatly benefit with the greater mobility that Metron will offer. With the right infrastructure in place, Metron provides quick access to JDA/BY data, any time, any place.

**Welcome to breaking free of the Workstation shackles.**

This application is most helpful to businesses that have managers and supervisors out and about in the warehouse or elsewhere, needing to use the GUI application for KPI reports and other management.

Metron will allow these users to break the tether to their workstations and access the same data while being mobile inside the warehouse or elsewhere.

## Metron will soon have:

Push notifications for your mobile devices based on events being programmed by the user.

Google Voice interface, to allow for easy interaction with the application.

Having the ability to customize each big screen monitor in your warehouse to selected DDAs in a chart/grid format.

## FUTURE FOR METRON

Metron is a part of a suite of applications being developed. Companies that sign on early will benefit from future enhancements as their feedback will be incorporated and continue to get the introductory pricing on future applications that are added to this suite.

Stay tuned to new development around Metron. We don't want to stop here but want to continue the mobile application paradigm and provide the capability for setting up push notifications, alerts, and even send back acknowledgments for possible corrective actions. Metron is here to open new doorways into your JDA/BY application.

- *Khurram Ahmad, CEO of Smart-IS International* →

# WHAT IS METRON?

Metron is an application that allows for JDA/Blue Yonder (BY) users to access meta-data information of the DDA and renders it on a mobile device. The Metron application offers added features to the GUI application such as, the ability to summarize and chart data for easy viewing.

This application opens new doorways into your JDA/BY application.

---

Add efficiencies to your work process allowing greater access to data and information.

**Metron provides access to all the rich features of the GUI application like, customizable views, column choice, column sorting, charting and summarizing etc., all in the palm of your hand, any place, any time.**

NEXT STEP IN

# WAREHOUSE MANAGEMENT

The rich data information in the JDA/BY application can only be accessed on the computer application, GUI; therefore, companies resort to creating outside services to access this data for their mobile population creating new development challenges. With the Metron application, the same DDA that is available from within the JDA/BY application, becomes available on the user's mobile device without any new development.

## THIS APPLICATION BRINGS CHANGES TO YOUR BUSINESS.

A company that currently manages the warehouse through various KPI DDAs, but seems limited in the effectiveness because of GUI, which is tethered to their desktops will, greatly benefit from this increased mobility.

*"Furthermore, this will provide timely reports without having to setup new data transfers and experiencing a lag in information. With the Metron application, your company can expand its DDA usage in the mobile world, increasing the mobility of your managers and supervisors."*

- Khurram Ahmad, CEO
